THE EXHIBITION

Canopic Jar Observation

Observe your canopic jars over the next few weeks to see if your fruit is preserved!

What do you notice? How does the fruit look? Does it smell different?

Write your observations in the chart below!

Canopic Jar Observations	Control (Plastic Snack Bag)	Baking Soda	Table Salt	Vinegar
Week 1				
Week 2				
Week 3				
Week 4				

Why do we make observations?

When we conduct experiments, we observe changes to gather data and help us answer research questions. When you began, did you predict that baking soda, table salt, or vinegar would be better at preserving fruit? You can find the answer by observing the changes over time within each jar compared to your control (the fruit in the Ziploc bag).
